

DOES USING SLURRYCAL PAY?

YES. One tonne of Slurrycal is sufficient to treat 80,000 gallons of slurry. Fertilizer value of treated slurry is increased by up to €12/1000 Gallons with agitation time reduced by up to 75%.

WHAT IS SLURRYCAL?

Slurrycal is a dual purpose high ph lime blend for use in cubicles and livestock stalls. It is designed to provide high levels of protection against disease-causing bacteria in the cubicle and uniquely enhance the slurry.

Slurrycal has been developed in conjunction with several international technology companies to enhance the slurry when it is brushed down and mixed into the slurry tank/store.

DIRECTIONS FOR USE

- Stir, agitate and aerate product before use
- Directly apply on to cubicles after cleaning
- Use 350g per cubicle per day
- Store in a dry area and keep bags closed at all times
- Store away from high voltage
- See material safety data sheet
- Treated slurry is aerobic and therefore unsuitable for use in Anaerobic digesters.

BENEFITS OF SLURRYCAL

- Creates a homogenous slurry
- Reduction in odours
- Breakdown and prevention of crusting
- Increased fertiliser value of slurry
- Reduction in agitation costs
- Promotes aerobic environment within slurry
- High pH helps protect animals from disease and infection

- **HYDRATED BLEND CUBICLE LIME (10/30%)**
- **SUPER P CUBICLE LIME**
- **SLURRYCAL**
- **STANDARD CUBICLE LIME**

High Purity Calcium Carbonates with Added Hydrated Lime

Farmcal Hydrated Blend Cubicle Lime is for use in livestock stalls. It is designed to provide high levels of protection against bacteria. The blend of high calcium limestone and hydrated lime will inhibit the growth of pathogenic bacteria, will aid the prevention of environmental mastitis whilst raising the PH value of farm effluents.

Benefits:

- Helps to protect the herd from disease and infection
- Ready made blend for immediate use no mixing required
- Can help prevent environmental mastitis
- Hydrated content boosts bacteria kill
- Significantly raised pH value of farm effluents
- Labour saving (less stall maintenance)
- Highly absorbent
- Available in 1 tonne bulk and 25kg bag
- Additional value as a source of lime when spreading

High Purity Calcium Carbonates with Added Hydrated Lime and Pine Disinfectant

Farmcal Super P Hydrated Blend Cubicle Lime with added pine disinfectants is for use in livestock stalls. It is designed to provide high levels of protection against bacteria. The blend of high calcium limestone and hydrated lime with added pine disinfectant will inhibit the growth of pathogenic bacteria, will aid the prevention of environmental mastitis whilst raising the PH value of farm effluents.

- Added pine disinfectant for max killing power.
- Fresh pine smell

Benefits:

- Helps to protect the herd from disease and infection
- Ready made blend for immediate use no mixing required
- Can help prevent environmental mastitis
- Hydrated content boosts bacteria kill
- Significantly raised pH value of farm effluents
- Labour saving (less stall maintenance)
- Highly absorbent
- Available in 1 tonne bulk and 25kg bag
- Additional value as a source of lime when spreading

Farmcal cubicle lime has being designed to control odour and maintain conditions in farm and livestock buildings such as:

- Cubicles
- Piggeries
- Stables
- Lambing Boxes
- General Feed areas

Farmcal cubicle lime has many advantages

- Finely ground for high surface area coverage and maximum absorption
- Does not have any grit particles so does not settle out in the base of tank and stays in suspension within the slurry
- Added fertilizer value for soil applied in slurry
- Neutralization of floor surfaces (inhibits against growth of pathogenic bacteria)
- Does not burn cow udders

Product Specifications

Calcium Carbonate	98%
Calcium as Ca	38.5%
Bulk Density	960kg/m ³
Moisture	<0.3%
